

RAVI RAJPOOT

Full Stack Developer — Live Streaming & VOD

✉ ravirajpoot2204@gmail.com | 🌐 github.com/ravirajpoot2204 | 🔗 linkedin.com/in/ravirajpoot2204 | 📞 +91 6388296339
Lucknow, India

EDUCATION

Ambalika Institute of Management & Technology <i>B.Tech CS – CGPA: 6.46 TCS NQT: 67%</i>	2024 <i>Lucknow</i>
St. Peter's Inter College <i>Intermediate (12th) – 64.6%</i>	2018 <i>Lucknow</i>
Malti Narayan Inter College <i>Matriculation (10th) – 73.5%</i>	2016 <i>Lucknow</i>

CAREER BREAK

- **Self-Led Project Development (June 2024 – Present):** Built production-grade live streaming & VOD platform. Learned MERN, WebRTC, RTMP, BullMQ, FFmpeg. Used YouTube + ChatGPT/DeepSeek for debugging.

PROJECT: YOUTUBE CLONE

Stack	Channel	Real-Time
– React, Node.js, Express – MongoDB, Redis, BullMQ – WebRTC, RTMP, FFmpeg – HLS.js, PM2, TailwindCSS	– Channel creation (req'd to go live) – Channel owner video management (CRUD) – Subscriptions (real-time DB) – Subscription count (instant save)	– WebSocket for live chat – Instant sub/like counts – Live viewer counters – Real-time DB updates
Architecture	Monetization	Standards Implemented
– Queue-based async transcoding – Sequential ladder: 1080p to 144p – PM2-managed background worker – FFmpeg HLS segmentation	– Payment verification for Super Chat – Super Chat (paid live messages) – Regular live chat (no payment) – Razorpay integration	– HLS streaming protocol – RTMP ingest (OBS) – WebRTC for low-latency – Adaptive bitrate ladder
Video Features	Engagement	Impact
– VOD upload & HLS streaming – Live: WebRTC + RTMP – OBS Studio integration – Adaptive bitrate playback – Thumbnail extraction	– Like/Dislike (real-time) – Comment CRUD – View counter (10-15s or 10-15%) – Link sharing	– Sub-2s video load time – Queue-based background processing – Real-time chat & updates

TECHNICAL SKILLS

Lang: JavaScript, HTML5, CSS3 | **Frontend:** React, CSS, HLS.js, WebRTC | **Backend:** Node.js, Express, BullMQ, Redis, FFmpeg, PM2, RTMP | **DB:** MongoDB Atlas, Mongoose | **Tools:** Git, Postman, Google Oauth 2.0, Razorpay, OBS Studio

HOW I LEARNED

- **Learning by Building + AI-Assisted Coding:** Solved real engineering problems – WebRTC vs RTMP tradeoffs, real-time DB updates, payment verification flows, HLS implementation.
- **Resources:** YouTube (fundamentals), ChatGPT & DeepSeek (debugging, AI-assisted coding, system design).
